- According to Pasteur's statements which one of the 6. following is true ?
  - (A) Living organisms discriminate between stereoisomers
  - (B) Fermentation is caused by microorganisms
  - (C) Living organisms don't discriminate between stereoisomers
  - (D) Both (A) and (B)
- 2. The light emitting luminescent bacteria is :
  - (A) Vibrio fischeri
  - (B) Photobacterium phosphoreum
  - (C) Vibrio anguilarum
  - (D) All of the above
- 3. Salt and sugar preserve foods because they :
  - (A) increase osmotic pressure
  - (B) Produce a hypertonic environment
  - (C) Deplete nutrient
  - (D) Both (A) and (B)
- 4. Father of microbiology is :
  - (A) Louis Pasteur
  - (B) Lister
  - (C) A.V. Leeuwenhoek
  - (D) Robert Koch
- 5. Compound microscope was discovered by :
  - (A) Antonie van Leeuwenhoek
  - (B) Louis Pasteur
  - (C) Johnsen & Hans
  - (D) None of these

- The main feature of prokaryotic organism is :
- (A) Absence of locomotion
- (B) Absence of nuclear envelope
- (C) Absence of nuclear material
- (D) Absence of protein synthesis
- Mycoplasmas are bacterial cells that :
  - (A) Fail to reproduce on artificial media
  - (B) Have a rigid cell wall
  - (C) Are resistant to penicillin
  - (D) Stain well with Gram's stain
- 8. Protein particles which can infect are called :
  - (A) Virons

7.

- (B) Prion
- (C) Nuclei
- (D) None of these
- 9. The colonies produced by Pseudomonas on MacConkey's medium are :
  - (A) Purple colored
  - (B) Pink colored
  - (C) Pale colored
  - (D) Green colored
- 10. Mesosomes are the part of :
  - (A) Plasma membrane
  - (B) ER
  - (C) Mitochondria
  - (D) Golgi apparatus
- 11. A culture medium the exact composition of which is not known was called as :
  - (A) Simple
  - (B) Enriched
  - (C) Defined
  - (D) Natural

- 12. The temperature required for pasteurization is :
  - (A) Above 100°C
  - (B) Below 100°C
  - (C) 100°C
  - (D) None of these
- 13. Best method for getting pure culture is :
  - (A) Streak-plate
  - (B) Sub culture
  - (C) Both (A) & (B)
  - (D) None of these
- 14. The major constituent in agar is :
  - (A) Lipids
  - (B) Amino-acids
  - (C) Polysaccharides
  - (D) Polypeptides
- 15. In the synthesis of cell components the major element required is :
  - (A) Nitrogen
  - (B) Sulphur
  - (C) Carbon
  - (D) Oxygen
- 16. In the sigmoid curve (or) growth curve of bacteria, there are \_\_\_\_\_\_ stages.
  - (A) 3
  - (B) 4
  - (C) 6
  - (D) 7
- 17. The genetic material in influenza A virus is :
  - (A) dsDNA
  - (B) dsRNA
  - (C) sRNA
  - (D) None of these

- 18. Which of the following is imperfect fungi?
  - (A) Basidiomycetes
  - (B) Deuteromycetes
  - (C) Zygomycetes
  - (D) Ascomycetes
- 19. Basic principle in industrial microbiology is :
  - (A) Suitable growth conditions
  - (B) Fermentation
  - (C) Providing aseptic conditions
  - (D) All of these
- 20. Submerged fermentations are :
  - (A) Batch fermentation
  - (B) Continuous fermentation
  - (C) Both (A) and (B)
  - (D) None of these
- 21. The organisms which can grow best in the presence of a low concentration of oxygen :
  - (A) Aerophilic
  - (B) Microaerophilic
  - (C) Aerobic
  - (D) Anaerobic
- 22. Plasmids are ideal vectors for gene cloning as :
  - (A) They are indispensable for genetic cloning
  - (B) They are essential for bacterial reproduction
  - (C) They can replicate freely outside the bacterial cell
  - (D) They are self replicating within the bacterial cell
- 23. The utilization of light energy to drive the synthesis of ATP is called as :
  - (A) Photolysis
  - (B) Phosphorylation
  - (C) Photosynthesis
  - (D) Respiration

3 ☑

- 24. Which is the Sulphur containing amino acid?
  - (A) Methionine
  - (B) Leucine
  - (C) Valine
  - (D) Arginine
- 25. For the synthesis of amino acids cysteine and methionine the element required is :
  - (A) Sulphur
  - (B) Oxygen
  - (C) Nitrogen
  - (D) None
- 26. During cyclic phosphorylation NADP is formed or not ?
  - (A) No NADP formation
  - (B) No NADP utilization
  - (C) NADP is concreted into NADPH
  - (D) All of the above
- 27. The compound that is added to the medium to absorb oxygen for the creation of anaerobic conditions :
  - (A) Potassium sulphate
  - (B) Nitrous acid
  - (C) Hydrogen peroxide
  - (D) None
- 28. The method in which the cells are frozen dehydrated 33. is called :
  - (A) Pasteurization
  - (B) Desiccation
  - (C) Disinfection
  - (D) Lyophilization

- 29. Choose the correct sequence among the following:Western blotting, Northern blotting and Southern blotting is a technique used in the determination of :
  - (A) Protein, RNA and DNA
  - (B) RNA, DNA and Protein
  - (C) DNA, RNA and Protein
  - (D) Protein DNA and RNA
- 30. Malate dehydrogenase enzyme is a :
  - (A) Hydrolase
  - (B) Oxido reductase
  - (C) Transferases
  - (D) Isomerase
- 31. The distance between each turn in the helical strand of DNA is :
  - (A) 20A°
  - (B) 34A°
  - (C) 42A°
  - (D) 28A<sup>0</sup>
- 32. The technique involved in comparing the DNA components of two samples is known as :
  - (A) Monoclonal Ab techniques
  - (B) Recombinant DNA technology
  - (C) Genetic finger printing
  - (D) Polymerase chain reaction
  - . What are the first cells to reach the site of a bacterial infection?
    - (A) Neutrophils
    - (B) Dendritic cells
    - (C) Lymphocytes
    - (D) RBCs

**4** ☑

- 34. The passage of blood cells through the intact walls of 40. the capillaries, typically accompanying inflammation is :
  - (A) Anaphylaxis
  - (B) Diapedesis
  - (C) Phagocytosis
  - (D) None of these
- 35. The antibody that is first formed after infection is :
  - (A) IgG
  - (B) IgM
  - (C) IgD
  - (D) IgE
- 36. The acquired immunity can be developed :
  - (A) Artificially
  - (B) Naturally
  - (C) Both
  - (D) None
- 37. Intensity of attraction between antigen and antibody molecule is known as :
  - (A) Affinity
  - (B) Avidity
  - (C) Synergism
  - (D) Precipitation
- 38. Phagocytosis is carried out by which cells ?
  - (A) Neutrophils
  - (B) Macrophages
  - (C) Dendritic cells
  - (D) All of these
- 39. What is the similarity between IgM and IgG?
  - (A) Compliment fixation
  - (B) Placental transport
  - (C) Heat stability at 56°C
  - (D) Sedimentation coefficient

# The oxidation of which substance in the body yields the most calories ?

- (A) Glucose
- (B) Proteins
- (C) Lipids
- (D) Glycogen
- 41. Which among the following is not an Archaebacteria?
  - (A) Euryarchaeota
  - (B) Korarchaeota
  - (C) Thaumoarchaeota
  - (D) Proteobacteria
- 42. The Mitochondrial DNA is :
  - (A) Circular double stranded
  - (B) Circular single stranded
  - (C) Linear single stranded
  - (D) Linear double stranded
- 43. The cofactor of the enzyme Ptyalin is :
  - (A) Manganese
  - (B) Chlorine
  - (C) Sodium
  - (D) Potassium
- 44. In denaturation of proteins, the bond which is not broken:
  - (A) Disulphide Bond
  - (B) Peptide bond
  - (C) Hydrogen bond
  - (D) Ionic bond
- 45. Cellulose is made up of the molecules of
  - (A) a-glucose
  - (B) ß-glucose
  - (C) Both
  - (D) None

#### SM-29582-A

5 ☑

#### [Turn over

- 46. A holoenzyme is :
  - (A) Functional unit
  - (B) Coenzyme
  - (C) Apoenzyme
  - (D) All of these
- 47. The Enzymes catalyzing electron transport are present mainly in the :
  - (A) Endoplasmic reticulum
  - (B) Nuclear membrane
  - (C) Inner mitochondrial membrane
  - (D) None of these
- 48. Cyanobacteria are believed to be the free living ancestors of :
  - (A) Plasmids
  - (B) Chloroplasts
  - (C) Fungi
  - (D) None of these
- 49. In a food chain, the total amount of living material is depicted by :
  - (A) Pyramid of biomass
  - (B) Pyramid of energy
  - (C) Pyramid of number
  - (D) Trophic levels
- 50. The particulate matter in the air can lead to :
  - (A) Rise in blood pressure
  - (B) Impaired kidneys
  - (C) Impaired nervous system
  - (D) Aggravated respiratory diseases

- 51. The water potential of a pure water is :
  - (A) 1
  - (B) -2
  - (C) Zero (0)
  - (D) None
- 52. The process of successful establishment of the species in a new area is called :
  - (A) Sere
  - (B) Climax
  - (C) Invasion
  - (D) Ecesis
- 53. Which is the first transgenic plant developed ?
  - (A) Transgenic Tobacco
  - (B) Transgenic Soyabean
  - (C) Transgenic Cotton
  - (D) Transgenic Maize
- 54. The term totipotency is the capability of :
  - (A) Cells to generate whole plant
  - (B) Bud to generate whole plant
  - (C) Seed to generate whole plant
  - (D) None of the above
- 55. Which enzyme is used by Agrobacterium for growth?
  - (A) Auxin
  - (B) Cytokinin
  - (C) Opine
  - (D) All of the above
- 56. Synthesis of hydrolyzing enzymes during germination is induced by :
  - (A) Indole-3-acetic acid
  - (B) AbscisicAcid
  - (C) Ethylene
  - (D) Gibberellic Acid
- 6 ☑

- 57. Which of the following is not a measure of central <sup>59</sup>. tendency ?
  - (A) Standard deviation
  - (B) Mean
  - (C) Mode
  - (D) Median
- 58. The probability of occurrence of an event lies between :
  - (A) -1 and 0
  - (B) 0 and 1
  - (C) -1 and 1
  - (D) Exactly 1

- Which of the following correlation coefficient value is considered as weak ?
  - (A) 0.5
  - (B) 2
  - (C) 0.2
  - (D) 0.4
- 60. The standard error is a measure of
  - (A) The standard error is computed from known sample statistics
  - (B) Representative sample parameter is likely to be of the population parameter
  - (C) It provides an unbiased estimate of the standard deviation of the statistic
  - (D) All of the above

	MICROB	OLOGY
Total Questions : 60		Question Booklet Series
Time Anowed : 70 Minute	28	Roll No. :
	Instructions for	Candidates ·
1. Write your Entrance Test Ro and fill up the necessary info	ll Number in the space	e provided at the top of this page of Question Bookl
<ol> <li>OMR Answer Sheet has an omaking entries in the Original so that the entries made in the Copy.</li> </ol>	Original Copy and a al Copy, candidate sl he Original Copy aga	Candidate's Copy glued beneath it at the top. Whit ould ensure that the two copies are aligned proper inst each item are exactly copied in the Candidate
3. All entries in the OMR Answ Copy only.	er Sheet, including ar	iswers to questions, are to be recorded in the Origin:
<ol> <li>Choose the correct / most app darken the circle of the appropread by the OMR Scanner and</li> </ol>	propriate response for priate response compl d no complaint to this	each question among the options A, B, C and D and etely. The incomplete darkened circle is not correctly
<ol> <li>Use only blue/black ball point gel/ink pen or pencil should b</li> </ol>	t pen to darken the cir be used.	ccle of correct/most appropriate response. In no case
6. Do not darken more than one c response shall be considered	circle of options for an wrong.	ny question. A question with more than one darkened
7. There will be 'Negative Marl of 0.25 marks from the total so	king' for wrong answ	vers. Each wrong answer will lead to the deduction
8. Only those candidates who we for admission.	ould obtain positive s	core in Entrance Test Examination shall be eligible
9. Do not make any stray mark on	the OMR sheet	
10. Calculators and mobiles shall r	not be permitted insid	le the examination 1. 11
11. Rough work, if any, should be	done on the blank she	rete provided - id. d
12. OMR Answer Sheet must be ha will not be evaluated	andled carefully and i	t should not be folded or mutilated in which
13. Ensure that your OMR Answe herself.	r Sheet has been sig	ned by the Invigilator and the candidate himself/
14. At the end of the examination, h the original OMR sheet in present 14782–A	and over the OMR An ace of the Candidate a	nswer Sheet to the invigilator who will first tear off ad hand over the Candidate's Copy to the candidate
	1	i v minintato.

- 1. Consider the following statements about the cell 6. theory:
  - Cell theory was proposed by Scleiden and Schwann
  - ii. Cells are generated from the dead material spontaneously
  - iii. Cell is the basic unit of life.

Choose the correct answer/s from the codes given below:

- (A) i, only
- (B) ii, iii only
- (C) i, iii only
- (D) iii, only
- 2. Archaebacteria are discovered by :
  - (A) Edelman
  - (B) Carl Woese
  - (C) Ehrlich
  - (D) Pasteur
- 3. Who is considered to be the father of medical microbiology?
  - (A) Koch
  - (B) Pasteur
  - (C) Jenner
  - (D) Tatum
- 4. Who is /are associated with the discovery of conjugation in bacteria?
  - (A) Griffth
  - (B) Lederberg and Tatum
  - (C) Both (A) and (B)
  - (D) Neither (A) nor (B)
- 5. Which of the following is considered to be a procaryotic ?
  - (A) Protozoan
  - (B) Helminth
  - (C) Mold
  - (D) Cyanobacteria

#### SV-14782-A

- The function of Agar was seen in culture medium by :
- (A) Petri
- (B) Skoog
- (C) Pasteur
- (D) Hesse

7.

The correct bionomial nomenclature of one of the important bacteria also known as super bug is:

- (A) Pseudomonas Putida
- (B) Pseudomonas putida
- (C) pseudomonas Putida
- (D) pseudomonas putida
- 8. The bacteria living at low temperatures are called as :
  - (A) Mesophiles
  - (B) Thermophiles
  - (C) Psychrophiles
  - (D) None of the above
- In most multicellular species of algae, individuals produce special sex cells, called gametes that have following feature/s:
  - (A) that contain only one set of chromosomes
  - (B) the gametes from two individuals fuse sexually and can develop directly into offspring
  - (C) they can form cells that subsequently produce spores
  - (D) All of the above.
- 10. Bovine spongiform encephalopathy is also known by the name/s :
  - (A) Mad dog disease
  - (B) Mad cow disease
  - (C) Kuru disease
  - (D) All of the above
- 20

11. Consider the following statements about the 16. \_\_\_\_\_ is not able to stimulate an immune response

- i. Human disease
- ii. Toxins
- iii. Hormone production

Choose the correct answer/s from the codes given below :

- (A) i, only
- (B) ii, iii only
- (C) i, iii only
- (D) iii only
- 12. Heterothallism is shown by :
  - (A) Rhizopus
  - (B) Peziza
  - (C) Personospora
  - (D) All of the above
- 13. Cytokines produced during immune response are :
  - (A) Proteins/glycoproteins
  - (B) Able to kill pathogens directly
  - (C) Often acting in synergy to induce immune response
  - (D) All of the above
- 14. Which system of the body due to hypersensitivity 20. produces allergic reactions ?
  - (A) Digestive system
  - (B) Pulmonary system
  - (C) Immune system
  - (D) Circulatory system
- 15. Antibodies have usually shape.
  - (A) R
  - (B) A
  - (C) Y
  - (D) M

SV-14782-A

- unless it is not bound to larger molecule.
- (A) Virus
- (B) Hapten
- (C) Antigen
- (D) Antibody
- 17. Which among the following molecule/s possess zero dipole moment?
  - (A) Para-dichlorobenzene
  - (B) Carbon tetrachloride
  - (C) Both (A) and (B)
  - (D) Neither (A) nor (B)
- Stability of DNA can be achieved through : 18.
  - (A) Hydrophobic interactions
  - (B) Hydrogen bonds between A and T
  - (C) Hydrogen bonds between G and C
  - (D) All of the above
- 19. Entropy decreases in case of :
  - (A) Protein denaturation
  - (B) Rusting of iron
  - (C) Curdling of Milk
  - (D) Condensation of water vapours
  - The units of first order reaction rate constant can be :
  - (A) sec-1
  - (B) moles/lit./sec
  - (C) moles/lit./sec<sup>2</sup>
  - (D) mole-1/lit/sec
- 21. What does enzyme activity refers to ?
  - (A) Potential energy of enzyme
  - (B) Enzyme specificity
  - (C) Catalytic ability
  - (D) Enzyme sensitivity

3 0

34. By what genetic analysis mechanism genetize ac	
of a dominant plant can be determined?	struction of
(A) Pedigree analysis Genomic libraries.	on addition of
(B) Back cross (A) Colony hybridization	
(C) Test cross (B) Shotgun approach	
(D) Dihybrid cross (C) PCR	
35. The role of $\sigma$ -subunit of RNA polymera. (D) All of the above	
(A) Specifies the site for transcription 40. The requirements for carrying out PC	U.
(B) Initiate the replication (A) Primers and buffer	. K are :
(C) Provide the contact between ribornal (B) Tag pol and MgCl	
and DNA template (C) DNA Template and dNTDa	
(D) Terminate the transcription (D) All of the above	
36. Consider the following statements about the 41. In clinical biochemistry and 1	
Euchromatin: scientist is to :	a clinical
i. It stains slightly (A) Help in diagnosing and monocia	
ii. It is partially condensed through the analysis of blood university of blood univer	the disease
iii. It is genetically active chromatin with genes body fluids	and other
Choose the correct answer/s from the codes given (B) Produce and validate the results of	Cohomin 1
below : and biochemical analyses	chemical
(A) 1, only (C) Both (A) and (B)	
(B) ii, iii only (D) Neither (A) nor (B)	
(C) i, ii, and iii 42. An LDH isoenzymes test is used to fin	d and d
(D) iii only location, type, and severity of tissue dated to him	u out the
37. Who had first sucessfully treated acute leukemia can help diagnose a number of different ca	unage. It
Transplantation of the Hematopoietic Stem Cell including:	Marcions
(A) There (A) Recent heart attack	
(B) Hanny (B) Liver disease, including hepati	itis and
(C) George	the third
(C) Both (A) and (B)	
(D) Eulson (D) Neither (A) nor (B)	
during the cell quele and phases 43. Polypeptide namely is important	for the
(A) S G1 phase expression of MHC1 on the cell membrar	ne.
(B) G2 S phase (A) $\beta_2$ microglobin	
(C) G1 G2 phase (B) Interferons	
(D) G1 S phase (C) Interleukines	
(D) Lymphokines	
SV-14782-A

34. By what genetic analysis mechanism	
of a dominant plant can be determined 2	be 39 technique is helpful in construction
(A) Pedigree analysis	Genomic libraries.
(B) Back cross	(A) Colony hybridization
(C) Test cross	(B) Shotgun approach
(D) Dihybrid cross	(C) PCR
35. The role of $\sigma$ -subunit of RNA polymerase is to	(D) All of the above
(A) Specifies the site for transcription	40. The requirements for carrying out PCR are
(B) Initiate the replication	(A) Primers and buffer
(C) Provide the contact between ribonuclease	(B) Taq pol amd MgCl
and DNA template	(C) DNA Template and dNTPs
(D) Terminate the transcription	(D) All of the above
50. Consider the following statements about the Euchromatin :	41. In clinical biochemistry, working as a clinical scientist is to :
1. It stains slightly	(A) Help in diagnosing and manage
ii. It is partially condensed	through the analysis of blood uning the disease
111. It is genetically active chromatin with genes	body fluids
choose the correct answer/s from the codes given	(B) Produce and validate the results of above in the
	and biochemical analyses
(A) 1, Only (B) :: ::: 1	(C) Both (A) and (B) $(A)$
(D) if it is a two $(C)$	(D) Neither (A) nor (B)
(C) 1, 11, and 111 (D) $::: -1$	42. An LDH isoenzymes test is used to find and d
37 Who had G	location, type, and severity of tissue damage I
through the U	can help diagnose a number of different conditiona
Transplantation 2	including :
(A) Thomas	(A) Recent heart attack
(B) Henry	(B) Liver disease, including hepatitis and
(C) George	cirrhosis
(D) Edison	(C) Both (A) and (B) $(a)$
38. Mitosis occurs between	(D) Neither (A) nor (B)
during the cell cycle and phases 43	Polypeptide namely is important for the
(A) S, G1 phase	expression of MHC1 on the cell membrane.
(B) G2, S phase	(A) $\beta_2$ microglobin
(C) G1, G2 phase	(B) Interferons
(D) G1, S phase	(C) Interleukines
· · · · · · · · · · · · · · · · · · ·	(D) Lymphokines

44. HDLs considered as good cholesterol vehicles, 48. One of the following hormones responsible for are synthesized in :

- (A) Liver
- (B) Blood
- (C) Intestines
- (D) Pancrease
- % water absorbed by herbaceous 49. 45. The plants is lost during transpiration.
  - (A) 60
  - (B) 75
  - (C) 90
  - (D) 99
- 46. Consider the following statements about the Nitrogen fixation in plants by nitrifying bacteria:
  - They convert free nitrogen to nitrogen i. compounds
  - ii. They oxidize ammonia to nitrates
  - They reduce nitrates to free nitrogen iii.

Choose the correct answer/s from the codes given below :

- (A) i, only
- (B) ii only
- (C) i, iii only
- (D) ii, iii only
- 47. The  $CO_2$  is converted to malate, a four carbon organic compound which is stored in the where it is later transported to the chloroplast for 52. conversion of malate to CO2 for photosynthesis.
  - (A) Vacuoles
  - (B) Endoplasmic reticulum
  - (C) Chloroplast
  - (D) Mitochondria

SV-14782-A

making RNA and proteins can be:

- (A) Auxin
- (B) Gibberellins
- (C) Ethylene
- (D) Cytokinin
- refers to the formation of embryoids from the pollen grains in the tissue culture medium.
- (A) Double fertilization
- (B) Cellular totipotency
- (C) Organogenesis
- (D) Test tube culture
- More and more secondary metabolite production 50. can be achieved through the hairy root cultures induced by transforming plant cells with :
  - (A) Agrobacterium rhizogenes
  - (B) Agrobacterium tumefaciens
  - (C) Bacillus thuringiensis
  - (D) Virus
- Which among the following plant fibres is known 51. as the "golden fibre"?
  - (A) Coir
  - (B) Jute
  - (C) Hemp
  - (D) All of the above
  - Brassica juncea is the scentific name of which one of the following Rabi crops ?
    - (A) Peas
    - (B) Gram
    - (C) Wheat
    - (D) Mustard
- 6 0

53. There is a great potential for fisheries in J&K UT 57. and the Dal and Wular lakes alone produce about

\_\_\_\_\_% of the total fish production in Jammu and Kashmir.

- (A) 50
- (B) 60
- (C) 70
- (D) 95
- 54. The ratio between the energy flow at different points along the food chain, after expressing it in %age is called as the :
  - (A) Ecological gradient
  - (B) Ecological effciency
  - (C) Energy flow efficiency
  - (D) Relative ratio of energy flow
- 55. Among the following chemical species, one typically cycling in most localized areas is :
  - (A) Phosphorus
  - (B) Carbon
  - (C) Water
  - (D) Nitrogen
- 56. Low levels of DO (Dissolved oxygen) in water bodies lead to the death of fish and other oxygen dependent organisms due to :
  - (A) Offensive sludge
  - (B) Methane
  - (C) Hydrogen sulphide
  - (D) All of the above

- 7. In case of statistical analysis where there is a symmetrical distribution, then :
  - (A) Mean and Mode coincide
  - (B) Mode and Median coincide
  - (C) Mean, Mode and Median coincide
  - (D) Mean and Median coincide
- 58. Example of Non- probability sampling can be :
  - (A) Snow ball sampling
  - (B) Cluster sampling
  - (C) Stratified sampling
  - (D) Simple random sampling
- 59. The variance calculated for the observation having values 4.2, 4.3, 4.0 and 4.1 taken in the lab is :
  - (A) 0.27
  - (B) 0.28
  - (C) 0.30
  - (D) 0.31
- 60. The Chi square value for the data, where one has8 red, 5 green, 12 orange, and 15 blue balls for testing the null hypothesis that the colors of the balls occur with equal frequency will be :
  - (A) 5.6
  - (B) 5.68
  - (C) 5.86
  - (D) 5.8

SS-543	7–A						1 \$	- X								[Tı	ırn over

- 1. Classification of viruses by David Baltimore 5. is based on differences in :
  - (A) The envelope proteins on the surface of viruses
  - (B) The modes of transmission of viruses
  - (C) The pathways required to synthesize virus mRNA
  - (D) Host cell receptors used by viruses
- 2. The typical coronavirus structure is :
  - (A) An icosahedral large pleomorphic virus
  - (B) Large regimented barrel shaped virus
  - (C) Club shaped glycoprotein spikes protrude through a lipid bilayer
  - (D) An icosahedral structure with an envelope
- 3. Target of the antibiotics on micro organisms is mainly due to :
  - (A) Inhibition of cell-wall synthesis
  - (B) Damage to the cytoplasmic membrane
  - (C) Inhibition of nucleic acid and protein synthesis
  - (D) All of the above
- 4. Which of the following is an unusual feature of the replication cycle in coronaviruses ?
  - (A) The RNAs all terminate in a common 3' end and produce nested set with the genome.
  - (B) They take advantage of recombination with the long RNA genome
  - (C) They are not highly mutable
  - (D) They use capped cellular mRNA's

- Identify the gene responsible for the evolutionary relationship between the taxonomic groups :
  - (A) 16S rRNA
  - (B) 23S rRNA
  - (C) 5S rRNA
  - (D) 18S rRNA
- 6. Select the pleomorphic bacteria
  - (A) Mycobacteria
  - (B) Corynebacterium
  - (C) Streptococcus
  - (D) Pseudomonas
- 7. Growth requirement for mycoplasma :
  - (A) Nitrogen
  - (B) Carbon
  - (C) Cholesterol
  - (D) Glucose
- 8. Double-stranded DNA is found in which viruses ?
  - (A) Poliomyelitis
  - (B) Influenza viruses
  - (C) Pox viruses
  - (D) None of the above
  - Which of the following is a parasitic algae ?
    - (A) Sargassus
    - (B) Cladophora
    - (C) Oedogonium
    - (D) Celphaleuros

SS-5437-A

- 10. Laminarin is an energy storage material 1 characteristic of :
  - (A) Chlorophyta
  - (B) Chrysophyta
  - (C) Phaeophyta
  - (D) Pyrrophyta
- 11. Mark the incorrect statement concerning *Giardia lamblia* :
  - (A) *G. Lamblia* has both a trophozoite and cyst stage in its life cycle
  - (B) *G. Lamblia* is transmitted by the fecal oral route from both human and animal sources
  - (C) G. Lamblia causes hemolytic anemia
  - (D) *G. Lamblia* can be diagnosed by the string test
- 12. Identify the organ associated for defence in protozoans :
  - (A) Statocysts
  - (B) Trichocysts
  - (C) Otocysts
  - (D) Nematocysts
- 13. Secondary metabolites such as penicillin from mold are produced during the :
  - (A) Lag phase
  - (B) Idiophase
  - (C) Log phase
  - (D) Decline phase
- SS-5437-A

- 10. Laminarin is an energy storage material 14. Clearances of antigens by antibodies involve :
  - (A) Neutralization and agglutination
  - (B) Opsonisation and complement activation
  - (C) Precipitation
  - (D) All of the above
  - 15. Hypervariable region of antibody consists of :
    - (A) 5-10 amino acids that form antigen binding site
    - (B) 50-100 amino acids that form antigen binding site
    - (C) 5-10 amino acids that form antibody binding site
    - (D) A part of constant region of heavy and light chain
  - 16. Which of the following factor affects the heat of reaction based on Kirchhoff equation ?
    - (A) Molecularity
    - (B) Temperature
    - (C) Pressure
    - (D) Volume
  - 17. Chemical dissociation is :
    - (A) Exothermic
    - (B) Reversible
    - (C) Endothermic
    - (D) Reversible and endothermic

- 18. The principle laws of photochemistry are :
  - (A) Grothus-Draper and Stark-Einstein law
  - (B) Raoult's and Dalton's law
  - (C) Raoult's and Henry's law
  - (D) Lambert's and Beer's law
- 19. Which of the following will result in deviation from Beer's law ?
  - i. Change in a refractive index of medium
  - ii. Dissociation of analyte on dilution
  - iii. Polychromatic light
  - iv. Path length of cuvette.
  - (A) i, ii and iii
  - (B) ii, iii and iv
  - (C) i, iii and iv
  - (D) i, ii and iv
- 20. Mark the incorrect statement :
  - (A) First step in photochemistry is excited state (photo excitation)
  - (B) When a molecule or atom in the ground state  $(S_0)$  absorbs light, one electron is excited to a higher orbital level
  - (C) It is possible for the excited state  $S_1$  to undergo spin inversion
  - (D) Photochemical reactions are caused by absorption of ultraviolet only

- 21. Which of the following processes are thermodynamically reversible ?
  - (A) Throttling
  - (B) Constant volume and constant pressure
  - (C) Hyperbolic and pV = C
  - (D) Isothermal and adiabatic
- 22. Mark the enzyme necessary for the below mentioned biochemical reaction : Triglyceride + 3H<sub>2</sub>O → Glycerol + Fatty acids
  - (A) Lipase
  - (B) Zymase
  - (C) Glycerol phosphate dehydrogenase
  - (D) Glycerol kinase
- 23. Identify the physical property differ for each of a pair of enantiomers ?
  - (A) Boiling point and melting point
  - (B) Index of refraction
  - (C) Solubility in ethanol
  - (D) Direction of rotation of plane-polarized light
- 24. Which of the following statements about an enzyme is incorrect ?
  - (A) An enzyme is usually a large protein
  - (B) An enzyme changes the equilibrium constant of a reaction
  - (C) An enzyme is a catalyst for biological reactions
  - (D) An enzyme is a chiral molecule

- 25. Catalase is found exclusively in :
  - (A) Lysosomes
  - (B) Peroxisomes
  - (C) Golgi apparatus
  - (D) Mitochondria
- 26. Substrate level phosphorylation in glycolysis 30. mtDNA is considered as one of the best marker is :
  - (A) Conversion of Glucose to Glucose-6phosphate
  - (B) Conversion of Glyceraldehyde-3-phosphate to 1, 3-Bisphosphoglycerate
  - (C) Conversion of Dihydroxyacetone phosphate to Glyceraldehyde-3-Phosphate
  - (D) Conversion of 1, 3-Bisphosphoglycerase to 3-Phosphoglycerate
- 27. Identify the organelle involved in apoptosis :
  - (A) Lysosome
  - (B) Mitochondria
  - (C) ER
  - (D) Golgi
- 28. The origin of polytene chromosome (as giant chromosome) is by the process of :
  - (A) Endomixes
  - (B) Endomitosis and endoreduplication
  - (C) Mitosis
  - (D) Meiosis

- 29. Major role of carbohydrates as a component of the cell membrane is .
  - (A) Adhesion
  - (B) Locomotion
  - (C) Recognition
  - (D) Reception
  - tool for population biologist and evolutionary biologist. The reason for this :
    - (A) Mitochondrial DNA undergo spontaneous mutation
    - (B) Mitochondrial DNA can be easily isolated
    - (C) Mitochondrial genes are specified to mtDNA
    - (D) Absence of genetic recombination in mtDNA
- 31. Which one of the following properties of telomerase is different from that of DNA polymerase ?
  - (A) Telomerase requires a template to direct the addition of nucleotides
  - (B) Telomerase can only extend a 3 -OH end of DNA
  - (C) Telomerase does not carry out lagging strand synthesis
  - (D) Telomerase acts in a processive manner
- 32. During development, if a cell has committed to a particular fate, it is said to be :
  - (A) Pluripotent
  - (B) Totipotent
  - (C) Determined
  - (D) Differentiated

- 33. Which of the following statements is incorrect 36. Identify the vector using in human genome about topoisomerases as a potential anticancer drug target ?
  - (A) As cancer cells are rapidly growing cells, they usually contain higher level of topoisomerases.
  - (B) The transient DNA breaks created by topoisomerases are usually converted to permanent breaks in the genome in the presence of topoisomerase targeted drugs.
  - (C) As cancer cells often have impaired DNA repair pathways, they are more susceptible towards topoisomerase targeted drugs.
  - (D) The drugs which specifically target topoisomerases, usually to do not affect normal fast growing cells.
- generation of nitric oxide, an important signaling molecule. The substrate for this enzyme is :
  - (A) Glycine
  - (B) Lysine
  - (C) Histidine
  - (D) Arginine
- 35. Which one of the following is not a neurotransmitter?
  - (A) Adrenaline
  - (B) Histidine
  - (C) Glutamate
  - (D) Histamine
- SS-5437-A

- project :
  - (A) Cosmid vectors
  - (B) Yeast artificial chromosomes
  - (C) Phagemid vector
  - (D) Yeast episomal plasmids
- 37. Which one of the following fungi is the most serious threat in a bone marrow transplant unit?
  - (A) Candida albicans
  - (B) Aspergillus
  - (C) Blastomyces
  - (D) Cryptococus
- 34. Nitric oxide synthase is responsible for 38. Enzymes responsible for alcoholic fermentation :
  - (A) Zymase
  - (B) Ketolase
  - (C) Peroxidase
  - (D) Oxidase
  - 39. Monoclonal antibodies are associated with the name of :
    - (A) Burnet
    - (B) Medwar
    - (C) Milstein kohler
    - (D) Owen

- tissues after establishing the infection is known as :
  - (A) Adhesion
  - (B) Invasiveness
  - (C) Toxigenicity
  - (D) None of these
- 41. Which of the following enzyme is defective in galactosemia — a fatal genetic disorder in infants?
  - (A) Glucokinase
  - (B) Galactokinase
  - (C) Galactose-1-phosphate uridyl transferase
  - (D) UPD-Galactose 4-epimerase
- 42. Gluconeogenesis occurs in the liver because of the presence of :
  - (A) Phosphofructokinase
  - (B) Pyruvate carboxylase
  - (C) Glucose 6 phosphatase
  - (D) Glucokinase
- 43. Emergence of unique functional heavy chainonly antibodies in which of the following animals?
  - (A) Dog
  - (B) Camel
  - (C) Pigeon
  - (D) Mice

- 40. The ability of a pathogen to spread in the host 44. Which one of the following is the correct order of electron transport during light reaction in the thylakoid membrane of chloroplast ?
  - (A) P680 ® Cytochrome b<sub>6</sub>f ® PC ® PQ
  - (B) P680 <sup>®</sup> PC <sup>®</sup> Cytochrome b<sub>s</sub>f <sup>®</sup> PQ
  - (C) P680 **®** PQ **®** PC **®** Cytochrome b<sub>c</sub>f
  - (D) P680 ® PQ ® Cytochrome b<sub>6</sub>f ® PC
  - 45. The  $C_4$  carbon cycle is a  $CO_2$  concentrating mechanism evolved to reduce photorespiration. The following are stated as important features of the C<sub>4</sub> pathway :
    - The leaves of C<sub>4</sub> plants have Kranz anatomy i. that distinguishes mesophyll and bundle sheath cells.
    - ii. In the peripheral mesophyll cells, atmospheric  $CO_2$  is fixed by phosphoenol pyruvate carboxylase yielding a four-carbon acid.
    - iii. In the inner layer of mesophyll, NAD-malic enzyme decarboxylates four-carbon acid and releases CO<sub>2</sub>.
    - iv. CO<sub>2</sub> is again re-fixed through Calvin cycle in the bundle sheath cells.

Which one of the following combinations is correct ?

- (A) i, iii and iv
- (B) i, ii and iii
- (C) i, ii and iv
- (D) i, iii and iv

46. Given below are names of phytohormones in 49. Identify the food chain type : column I and their associated features/effects/ functions in column II :

Π

Ι

(a)	Auxin	(i) Delayed leaf	
		senescence	

- (b) Gibberellins (ii) Epinastic bending of leaves
- (iii) Polar transport (c) Cytokinin
- (d) Ethylene (iv) Removal of seed dormancy

Select the correct set of combinations from the options given below :

(a)	(b)	(c)	(d)
(:::)	(::)	(:)	$(\cdot)$

- (A) (iii) (11) (1V)(1)
- (B) (iv) (iii) (i) (ii)
- (C) (iii) (iv) (i) (ii)
- (D) (i) (iv) (ii) (iii)
- 47. Which one of the following is used for Targeting Induced Local Lesions in Genomes (TILLING)?
  - (A) T-DNA tagging by Agrobacterium-mediated transformation
  - (B) Transposon tagging using Ac/Ds elements
  - (C) Mutagenesis with ethylmethane sulphonate
  - (D) Protoplast transportation by electroporation
- 48. Lake zone having phytoplanktons in abundance : 53. The workers of cement factory are prone to :
  - (A) Littoral zone
  - (B) Benthic zone
  - (C) Limnetic zone
  - (D) Profundal zone
- SS-5437-A

- Dead animals  $\rightarrow$  blowfly maggot  $\rightarrow$  maggots  $\rightarrow$  frog  $\rightarrow$  snake
  - (A) Detrital food chain
  - (B) Decomposer food chain
  - (C) Predator food chain
  - (D) Grazing food chain
- 50. Point out the 'K' selected species :
  - (A) Aspergillus
  - (B) Human
  - (C) Taraxacum
  - (D) Grass
- 51. The middle region of thermal stratification, showing the vertical temperature change is called :
  - (A) Mesolimnion
  - (B) Epilimnion
  - (C) Metalimnion
  - (D) Hypolimnion
- The purpose of Lincoln index is to measure : 52.
  - (A) Population mortality rate
  - (B) Population natality rate
  - (C) Population size
  - (D) Population density
- - (A) Leukemia
  - (B) Bone marrow diseases
  - (C) Asbestosis
  - (D) Cytosilicosis
- 8 ☆

54. The Yak (ox) and the Bharal are found in :

- (A) Uttarakhand
- (B) Himachal Pradesh
- (C) Jammu and Kashmir
- (D) Ladakh
- 55. Which of the following statements is true about the Air Quality Index ?
  - (A) It indicates the colour of the air.
  - (B) It predicts ozone levels in your area.
  - (C) It determines the intensity of sound and sound pollution.
  - (D) It estimates air pollution mainly sulphur content in the air.
- 56. Algal productivity in fresh water lakes is limited by the availability of inorganic ions of :
  - (A) Carbon
  - (B) Nitrogen
  - (C) Phosphorus
  - (D) All of the above
- 57. Select the wrong statement regarding correlation :
  - (A) In case of positive correlation, the two variables move in the same direction
  - (B) In case of negative correlation, the two variables move in different directions
  - (C) The value of coefficient of correlation (r) vary in between -1 to +1
  - (D) The calculated r value "0.075" indicates strong positive correlation

- 58. The result of a statistical test, denoted p, shall be interpreted as follows :
  - (A) The null hypothesis  $h_0$  is rejected if p < 0.05
  - (B) The null hypothesis  $h_0$  is rejected if p > 0.05
  - (C) The alternate hypothesis  $h_1$  is rejected if p > 0.05
  - (D) The null hypothesis  $h_0$  is accepted if p < 0.05
- 59. The value of Chi-square will be zero when :
  - (A) Expected frequency is less than the observed frequency
  - (B) Expected frequency is equal to the observed frequency
  - (C) Expected frequency is double that of the observed frequency
  - (D) Expected frequency is greater than the observed frequency
- 60. Identify the statistical test to validate the statement "people having high cholesterol suffer from hypertension".
  - (A) Student's t-test
  - (B) Regression analysis
  - (C) Pearson correlation coefficient test
  - (D) ANOVA

#### SS-5437-A

### **ROUGH WORK**

## **ROUGH WORK**

14	At the end of the original OMR s	e examination, hand over the OM heet in presence of the Candidate	AR Answer Sheet to the	e invigilator	r who will f	irst tear o	ffthe
13.	. Ensure that you	r OMR Answer Sheet has been s	igned by the Invigilator	r and the ca	ndidate him	self/hers	elf.
12	. OMR Answer S be evaluated.	heet must be handled carefully ar	nd it should not be folded	d or mutilat	ed in which	case it wi	ill not
11.	. Rough work, if	any, should be done on the blan	k sheets provided with	the questio	n booklet.		
10	. Calculators and	mobiles shall not be permitted ir	uside the examination h	all.			
9.	Do not make ar	ny stray mark on the OMR shee	t.		Q stars		
8.	Only those cane admission.	didates who would obtain positi	ve score in Entrance T	`est Examir	nation shall	be eligib	le for
7.	There will be ' 0.25 marks from	Negative Marking' for wrong m the total score of the candidat	answers. Each wrong e.	answer wil	ll lead to the	e deducti	lon of
6.	Do not darken response shall b	more than one circle of options be considered wrong.	for any question. A qu	estion with	ı more than	one dark	cened
5.	Use only blue/ gel/ink pen or p	black ball point pen to darken t encil should be used.	he circle of correct/me	ost approp	riate respor	ise. In no	case
4.	Choose the con darken the circ read by the OM	rrect / most appropriate response le of the appropriate response c IR Scanner and no complaint to	se for each question ar ompletely. The incomj this effect shall be ente	nong the o plete darke rtained.	ptions A, B med circle i	, C and I s not cor	D and rectly
3.	All entries in the only.	e OMR Answer Sheet, including	answers to questions, a	ire to be rec	orded in the	Original	Сору
2.	OMR Answer S entries in the On made in the Ori	Sheet has an Original Copy and a riginal Copy, candidate should en ginal Copy against each item are	Candidate's Copy glue sure that the two copies exactly copied in the Ca	ed beneath are aligned andidate's (	it at the top. I properly so Copy.	While m that the e	aking entries

The technique recently tested for gene therapy is : 8. 1.

- (A) Protein editing
- (B) RNA editing
- (C) CRISPR
- (D) All of the above
- SINEs are : 2.
  - (A) Non-repetitive DNA sequences
  - (B) Repetitive DNA sequences
  - (C) Semi-repetitive DNA sequences
  - (D) Unique 5' UTR mRNA sequences
- Genome cannot be rearranged by : 3.
  - (A) Point mutation
  - (B) Recombination
  - (C) Transposition
  - (D) Gene conversion
- The histone acetylation is a mark of : 4.
  - (A) Inactive gene expression
  - (B) Active gene expression
  - (C) Gene rearrangement
  - (D) Active gene repression
- Which of the following sequences correctly portrays 12. Minamata disease was due to water polluted by : 5. the flow of electrons during photosynthesis?
  - (A) NADPH  $\rightarrow$  chlorophyll  $\rightarrow$  Calvin cycle
  - (B) NADPH  $\rightarrow$  electron transport chain  $\rightarrow O_2$
  - (C)  $H_2O \rightarrow photosystem I \rightarrow photosystem II$
  - (D)  $H_2O \rightarrow NADPH \rightarrow Calvin cycle$
- Which of the following coenzyme takes part in 6. tissue respiration?
  - (A) Coenzyme Q
  - (B) Coenzyme A
  - (C) NADP
  - (D) Cobamide
- Auxin response factors are involved in : 7.
  - (A) Gene expression
  - (B) Post-translational modifications
  - (C) Both (A) and (B)
  - (D) None of the above

.I.J-323-D

- Ethylene receptor complex is located on :
- (A) Nucleus
- (B) Cell Wall
- (C) Endoplasmic reticulum
- (D) None of the above
- Was/were first to culture plant cells in-vitro : 9.
  - (A) Schleiden
  - (B) Schwann
  - (C) Haberlandt
  - (D) Kolte and Robbins
- 10. Cement factory labourers are proven to :
  - (A) Leukaemia
  - (B) Bone marrow disease
  - (C) Asbestosis
  - (D) Cytosilicosis
- 11. 5<sup>th</sup> June is observed as :
  - (A) World Forestry Day
  - (B) World Environmental Day
  - (C) World Wildlife Day
  - (D) World Population Day
  - - (A) Methyl mercury
    - (B) Methyl isocyanate
    - (C) Methyl carbonate
    - (D) Lead
- Which is the popular cold water fish in Kashmir 13. valley?
  - (A) Brown trout
  - (B) Rainbow trout
  - (C) Both (A) and (B)
  - (D) None of the above
- 14. The composition of plant fibres of Jute is (Major component):
  - (A) Lignin and chitin
  - (B) Hemi-cellulose
  - (C) Hemi-cellulose and chitin
  - (D) Cellulose and lignin

2 \*\*\* 15. Universally accepted theories of organic evolution 21. The existence of Microbes was first reported by : are : (A) Louis Pasteur

- (A) Modern synthetic theory of evolution
- (B) Hugo Devries mutation, and Weismanner's germplasm theories
- (C) Theories of Parasitism and Lamarckism
- (D) All of these
- 16. Which one of the following is not gaseous biogeochemical cycle in ecosystem?
  - (A) Nitrogen cycle
  - (B) Carbon cycle
  - (C) Phosphorus cycle
  - (D) Water cycle
- 17. If the values of a set are measured in centimeters, the unit of variance will be :
  - (A) No unit
  - (B) Cm
  - (C)  $Cm^2$
  - (D)  $Cm^3$
- 18. The range of regression coefficients is :
  - (A) -1 to +1
  - (B)  $-\infty$  to  $+\infty$
  - (C) 0 to  $+\infty$
  - (D) 0 to 1
- 19. Analysis of variance utilizes :
  - (A) F-test
  - (B) Chi square test
  - (C) Z-test
  - (D) T-test
- 20. Paired t-test is applicable when the observations in 26. the two samples are :
  - (A) Paired
  - (B) Correlated
  - (C) Equal in number
  - (D) All the above

- (B) Robert Koch & Fleming
- (C) Robert Hook & Anton Von Leeuen Hoek
- (D) None of the above
- 22. Antiseptic surgery was developed by :
  - (A) Edward Jenner
  - (B) Paul Ehrlich
  - (C) Karry B Mulis
  - (D) Joseph Lister
- 23. Zinkarnagel and Doherty were awarded Nobel Prize for discovery of:
  - (A) rDNA technology
  - (B) Interleukin I
  - (C) MHC II Antigen
  - (D) MHC Restriction phenomenon
- 24. Which of the following is not a distinguishing characteristic of prokaryotic cells?
  - (A) A single circular chromosome
  - (B) 80s Ribosome
  - (C) Cell wall containing Peptidoglycan
  - (D) DNA not associated with histories
- 25. Which of the following in the cell wall make bacteria acid fast?
  - (A) Glycoprotein
  - (B) Peptidoglycan
  - (C) Mycolic acid
  - (D) Arabinoglycan

Stanley Prusiner discovered self-replicating pathogens called :

- (A) Prions
- (B) BSE agent
- (C) Viriods
- (D) Scrapie

JJ-323-D

3 **\*\***\*\*

[Turn over

27. Which of the following does not pose zoonotic 33. Catalytic antibodies which have dual role as potential?

- (A) SARS virus
- (B) COVID-19
- (C) Infectious Bronchitis virus
- (D) MERS virus
- 28. Bacterial genetic variation may be due to :
  - (A) Transformation
  - (B) Conjugation
  - (C) Transduction
  - (D) All the above
- 29. Which of the following is used to classify organisms into kingdom Fungi?
  - (A) Ability to photosynthesize, possess a cell wall
  - (B) Unicellular, possess cell wall, prokaryotic
  - (C) Unicellular, lacking cell wall, eukaryotic
  - (D) Absorptive, possess cell wall, eukaryotic
- 30. Most systemic infections due to fungi in human and animals belong to the class :
  - (A) Ascomycetes
  - (B) Deuteromycetes
  - (C) Phycomycetes
  - (D) Zygomycetes
- 31. Germ tubes are demonstrated in which of the following?
  - (A) Histoplasma
  - (B) Coccidioides
  - (C) Candida
  - (D) Blastomyces
- 32. Parasites have following modes of nutrition :
  - (A) Autotrophic
  - (B) Heterotropic
  - (C) Saprozoic
  - (D) All of the above

JJ-323-D

antibody and enzyme are called :

- (A) Monoclonal antibodies
- (B) Ubiquibodies
- (C) Abzymes
- (D) Immunotoxins
- 34. Circulating blood cells that differentiate into macrophage in tissue are :
  - (A) Kuffer cells
  - (B) Eosinophils
  - (C) Mast cells
  - (D) Monocytes
- Small organic molecules that are antigenic but not 35. immunogenic are called :
  - (A) Antigens
  - (B) Carriers
  - (C) Haptens
  - (D) Immunogens
- 36. Most effective antigen processing cell is :
  - (A) B-cell
  - (B) Dendritic cell
  - (C) Macrophage
  - (D) None
- 37. Identify the one which does not come under the organic addition reaction :
  - (A) Hydration
  - (B) Dehydration
  - (C) Halogenation
  - (D) Hydrohalogenation
- 38. Rusting of iron occurs due to :
  - (A) Reduction
  - (B) Hydrogenation
  - (C) Oxidation
  - (D) Sublimation

39. Which of the following is not an example of redox 45. Shine-Dalgarno sequence is the binding site for : reaction?

- (A)  $CuO + H_2 \rightarrow Cu + H_2O$
- (B)  $Fe_2O_3 + 3CO \rightarrow 2Fe + 3CO_2$
- (C)  $2K + F_2 \rightarrow 2KF$
- (D)  $BaCl_2 + H_2SO_4 \rightarrow BaSO_4 + 2HCl$
- 40. In an open system, for maximum work, the process must be entirely :
  - (A) Irreversible
  - (B) Reversible
  - (C) Adiabatic
  - (D) None of the mentioned
- 41. In liver decrease there is decreased serum level of :
  - (A) Creatinine
  - (B) Amylase
  - (C) Urea
  - (D) SGPT
- 42. Diagnosis of organophosphates involves the estimation of:
  - (A) SGOT
  - (B) Glycerol
  - (C) Glutamine
  - (D) AChE
- 43. The serum level of conjugated bilirubin increases in:
  - (A) Obstructive liver disease
  - (B) Liver damage
  - (C) Kidney obstruction
  - (D) All of the above
- 44. The antibody mostly used in immunochemical technique is :
  - (A) Ig A
  - (B) Ig D
  - (C) IgE
  - (D) None of these

- (A)  $\alpha$  factor
- (B)  $\Omega$  factor
- (C) DNA Pol
- (D) Ribosome
- 46. Regions of DNA that are associated with nuclear matrix are :
  - (A) AT rich
  - (B) GC rich
  - (C) AC rich
  - (D) None of these
- 47. Termination of transcription involves :
  - (A)  $\beta$  factor
  - (B) Rho factor
  - (C)  $\alpha$  factor
  - (D) All of the above factors
- 48. RNA polymerase involved in the expression of tRNA genes is :
  - (A) RNA Pol I
  - (B) RNA Pol II
  - (C) RNA Pol III
  - (D) RNA Pol IV
- 49. Removal of phosphate moiety is catalyzed by :
  - (A) Phosphatases
  - (B) Kinases
  - (C) Both (A) and (B)
  - (D) Dehydrogenases
- 50. O- $\alpha$ -D-Glucopyranosyl- $(1 \rightarrow 4)$ - $\alpha$ -D-glucopyranose is:
  - (A) Sucrose
  - (B) Maltose
  - (C) Lactose
  - (D) Galactose
- 51. Co-enzyme for carboxylase is :
  - (A) Niacin
  - (B) Thiamine
  - (C) Biotin
  - (D) Folic acid

5 \*\*\*

[Turn over

- (A) A
- (B) B6
- (C) Biotin
- (D) K

53. Deficiency of glucose-6-phosphatase causes :

- (A) von Gierke's disease
- (B) Pompe's disease
- (C) Hers' disease
- (D) None of the above
- 54. Excess amino acids are :
  - (A) Stored
  - (B) Degraded
  - (C) Converted to proteins
  - (D) Converted to organic acids
- 55. Ketogenesis involves :
  - (A) NADPH
  - (B) FAD+
  - (C) NADH
  - (D) FMN

56. Cytochrome oxidase is inhibited by :

- (A) H<sub>2</sub>S
- (B) CO
- $(C) O_2$
- (D) Both (A) and (B)

#### JJ-323-D

- 57. The technique used to analyse protein-DNA interaction is:
  - (A) Immunoprecipitation
  - (B) Haemagglutination
  - (C) RIA
  - (D) ChIP
- 58. The material used for separation of whole cells by centrifugation is :
  - (A) Cesium chloride
  - (B) Sodium iodide
  - (C) Glycerol
  - (D) Bovine serum albumin
- 59. The class of hormones that can diffuse through plasma membranes is :
  - (A) Lipid-derived hormones
  - (B) Amino acid-derived hormones
  - (C) Peptide hormones
  - (D) Glycoprotein hormones
  - 60. Metabolism of a cell is determined by the :
    - (A) Size of proteins in the cell
    - (B) The genetic material
    - (C) Protein composition of the DNA
    - (D) Activity of enzymes produced in the nucleus

- 1. The name enzyme was coined by :
  - (A) Wilhelm Kühne
  - (B) Michaelis and Menten
  - (C) Kary Mulis
  - (D) None of the above
- 2. In case of Competitive type of enzyme inhibition, which of the following statements is correct?
  - (A) K<sub>M</sub> decreases and V<sub>max</sub> remains constant
  - (B)  $K_{M}$  increases and  $V_{max}$  remains constant
  - (C) Both  $K_M$  and  $V_{max}$  decrease
  - (D) Both  $K_{M}$  and  $V_{max}$  increase
- 3. RNA is polymer of purine and pyrimidine ribonuleotides linked together by :
  - (A) Hydrogen bonds
  - (B) van der Waal's forces
  - (C) 3'--5' phosphodiester linkages
  - (D) 5'-3' phosphodiester linkages
- 4. Protein-energy malnutrition (PEM) refers to a state where the infant's dietary intake is insufficient in :
  - (A) Proteins
  - (B) Overall calories
  - (C) Carbohydrates
  - (D) Both (A) and (B)
- 5. Which among the following is the best possible explanation for glycolytic pathway to continue in the direction of glucose catabolism ?
  - (A) There are essentially three irreversible reactions that act as the driving force for the pathway
  - (B) High levels of ATP keep the pathway going in a forward direction
  - (C) The enzymes of glycolysis only function in one direction
  - (D) Glycolysis occurs in either direction
- 6. The number of net ATPs produced during complete oxidation of palmitic acid *via*  $\beta$  oxidation are :
  - (A) 131
  - (B) 129
  - (C) 146
  - (D) 148
- FDM-2549-B

- 7. Lovastatin is helpful in reducing :
  - (A) Blood Cholesterol
  - (B) Glycogen

8

- (C) Blood glucose
- (D) None of the above

In Hartnup's disease, the urine of a patient is containing highly increased amounts of:

- (A) Tryptophan
- (B) Indole acetic acid
- (C) Tyrosine
- (D) Both (A) and (B)

Insulin is a protein that is produced by certain pancreatic cells and secreted into the blood stream. Which of the following choices best describes the route of insulin from its production to its exit from the cell?

- (A) Rough ER, transport vesicles, cell membrane
- (B) Rough ER, transport vesicles, Golgi apparatus, transport vesicles, cell membrane
- (C) Rough ER, lysosomes, transport vesicles, cell membrane
- (D) Rough ER, Golgi apparatus, smooth ER, cell membrane

The \_\_\_\_\_\_ of a mitochondrion is/are an adaptation that increases the surface area and enhances mitochondrion's ability to produce ATP.

- (A) Stroma
- (B) Grana

10.

- (C) Inter membrane space
- (D) Cristae
- 11. Consider the following facts about membrane phospholipids:
  - (i) Have hydrophilic heads that face outward and are exposed to water
  - (ii) Have hydrophobic tails that face inward and are shielded from water

Choose the correct answer/s from the codes given below :

- (A) (i) only
- (B) (ii) only
- (C) Both (i) and (ii)
- (D) Neither (i) nor (ii)
- 2++

- 12. Consider the following facts about chloroplasts :
  - (i) Chloroplast ribosomes can synthesize all chloroplast proteins
  - (ii) Ribulose-1, 5-bisphosphate carboxylase/ oxygenase is concentrated in the stroma of chloroplasts.

Choose the correct answer/s from the codes given below :

- (A) (i) only
- (B) (ii) only
- (C) Both (i) and (ii)
- (D) Neither (i) nor (ii)
- Consider the following statements : Assertion (A) : Incompatibility is a gene-physiology

process

Reason (R): Moderately high temperatures are also known to reduce the self-incompatibility reaction in certain plants.

Select the correct answer from the codes given below :

- (A) Both (A) and (R) are true, but (R) is the correct explanation of (A)
- (B) Both (A) and (R) are true, and (R) is not the correct explanation of (A)
- (C) (A) is true, but (R) is false
- (D) (A) is false, but (R) is true
- 14. Ovum producing Klinefelter's syndrome shall have chromosome number :
  - (A) 21
  - (B) 22
  - (C) 23
  - (D) 24
- 15. Negative regulation of protein synthesis is accomplished by:
  - (A) Allosteric inhibition
  - (B) The binding of RNA polymerase to the promoter
  - (C) The binding of a repressor to the DNA
  - (D) The binding of a repressor to the RNA polymerase

#### FDM-2549-B

- 16. The outcomes of point mutations include :
  - (A) Missense mutation
  - (B) Nonsense mutation
  - (C) Silent mutation
  - (D) All of the above
- 17. During which stage of cell cycle, replication takes place?
  - (A)  $G_1$  phase
  - (B) S phase
  - (C) G, phase
  - (D) M phase
- Self-phosphorylation is an excellent mechanism for triggering specific catalytic function of the proteins involved in signal cascades because it :
  - (A) Changes the shape and thus the enzymatic activity of the proteins involved
  - (B) Makes the receptor more likely to capture the signaling molecule
  - (C) Allows hydrophilic signaling molecules to cross the plasma membrane
  - (D) None of the above
- 19. The name of Restriction enzymes is based on :
  - (A) The person who discovered them
  - (B) The bacterium they are derived from
  - (C) The viral DNA that they attack
  - (D) None of the above
- 20. The enzyme/s used in PCR is/are :
  - (A) T aq pol
  - (B) P fu pol
  - (C) Vent pol
  - (D) All of the above
- 21. Antibody diversity arises from :
  - (A) Gene amplification
  - (B) Gene re-arrangement
  - (C) Alternative splicing
  - (D) All of the above

- 22. The formula to calculate maximum urea clearence is 28.  $(U \times V)/B$ , where U denotes :
  - (A) Concentration of urea in urine in g/24 hr
  - (B) Concentration of urea in urine in mg/100 ml
  - (C) Concentration of urea in blood in mg/100 ml
  - (D) Volume of urine in ml/min
- 23. The isoenzyme LDH, is elevated in :
  - (A) Myocardial infarction
  - (B) Peptic ulcer
  - (C) Liver disease
  - (D) Infectious diseases
- 24. Genes encoding cell surface glycoproteins that are required for antigen presentation to T cells and also responsible for rapid graft rejection is called as :
  - (A) MHC complex
  - (B) B cell complex
  - (C) T cell complex
  - (D) None of the above
- 25. The rate of transpiration increases with the increase in:
  - (A) Wind
  - (B) Light
  - (C) Temperature
  - (D) All of the above
- 26. The hormone helpful in natural root stimulation is :
  - (A) Auxin
  - (B) Traumatic
  - (C) Florigen
  - (D) None of the above
- 27. During nitrogen cycle nitrites are converted into nitrates by :
  - (A) Aztobacter
  - (B) Rhizobium
  - (C) Nitrobacter
  - (D) Clostridium
- FDM-2549-B

- In order to reduce six CO<sub>2</sub> molecules to glucose during photosynthesis, the number of ATPs and NADPH required are :
  - (A) 12 ATP and 6 NADPH
  - (B) 6 ATP and 6 NADPH
  - (C) 18 ATP and 12 NADPH
  - (D) 18 ATP and 6 NADPH
- 29. During protoplast fusion, the fusogen used is :
  - (A) Manitol
  - (B) Sorbitol
  - (C) Polyethylene Glycol
  - (D) Ethylene Glycol
- 30. The phenomenon "Somaclonal" variation is associated with:
  - (A) Plant tissue culture technology
  - (B) Hybridoma technology
  - (C) DNA recombinant technology
  - (D) None of the above
- 31. Jute cultivation in India is concentrated in the delta area of which of the following rivers ?
  - (A) Ganga
  - (B) Mahanadi
  - (C) Brahamputra
  - (D) Godavari
- 32. Artemisia sp. are sources of well established secondary metabolite artmisnin, used for treatment of:
  - (A) Malaria
  - (B) Diabetes
  - (C) Arthritis
  - (D) Cardiovascular disease
- 33. The main nitrogen reservoir in the biosphere is :
  - (A) Rocks
  - (B) Atmosphere
  - (C) Ocean
  - (D) Organism
- 4

- 34. The carrying capacity of any given population is 39. determined by its :
  - (A) Population growth rate
  - (B) Birth rate
  - (C) Death rate
  - (D) Limiting resources
- 35. Compared with COD, the BOD of a wastewater sample is generally :
  - (A) Greater
  - (B) Equal
  - (C) Less
  - (D) None of the above
- 36. Consider the following facts about Heerpora Wildlife Sanctuary :
  - (i) It is located in Shopian district of Kashmir
  - (ii) It has around 50 individuals the critically endangered Pir Panjal markhor
  - (iii) It has around 156 individuals of Hangul (Kashmir stag)

Choose the correct answer/s from the codes given below :

- (A) (i) only
- (B) (ii) only
- (C) (i) and (ii) only
- (D) (i), (ii) and (iii)
- 37. If arithmetic mean is multiplied to coefficient of variation then resulting value is classified as :
  - (A) Coefficient of deviation

业.

- (B) Coefficient of mean
- (C) Standard deviation
- (D) Variance
- 38. Tickets numbered 1 to 20 are mixed up and then a ticket is drawn at random. What is the probability that the ticket drawn has a number which is a multiple of 3 or 5 ?
  - 015015
  - (A) 1/20
  - (B) 3/20
  - (C) 5/20
  - (D) 9/20
- FDM-2549-B

- The number of variables one should have in order to run a one-sample Chi-square analysis :
  - (A) You can have only 1
  - (B) At least 5
  - (C) At least 3
- (D) There are no restrictions
- 40. If one regression coefficient is greater than one, then other will be :
  - (A) More than one
  - (B) Equal to one
  - (C) Less than one
  - (D) Equal to minus one
- 41. All of the following scientists got Nobel Prize for their contribution in the field of Microbiology except :
  - (A) Antony Van Leeuwenhoek
  - (B) Elie Metchnikoff
  - (C) Paul Ehrlich
  - (D) Robert Koch
- 42. Each of the following agents is a recognized cause of diarrhea except :
  - (A) Clostridium perfringens
  - (B) Vibrio cholera
  - (C) Enterococcus faecalis
  - (D) Escherichia coli
- 43. The fact that is not true about eukaryotes :
  - (A) Mitosis
  - (B) Cell wall, if present, is chemically simple
  - (C) Larger size 80S ribosome located in organelles
  - (D) Glycocalyx present in some cells that lack a cell wall

- While discussing binomial nomenclature, parts of 48. Consider the following facts about the role/s of 44. scientific names are :
  - (A) Genus and class
  - (B) Genus and kingdom
  - (C) Genus and species
  - (D) Genus and phylum
- 45. It has been said that bacteria are essential for the existence of life on earth, which of the following would be the essential function performed by bacteria?
  - (A) Control insect population
  - (B) Directly provide food for humans
  - (C) Decompose organic material and recycle elements
  - (D) Produce human growth hormone such as insulin
- 46. Consider the following statements about archaea:
  - (i) Prokaryotes characterized as extremophiles that share some bacterial and some eukaryotic traits
  - Organisms that are adapted to high temperature (ii) environments such as volcanic springs
  - (iii) Bacteria like organisms that can live only in extreme salt environments.

Choose the correct answer/s from the codes given below:

- (A) (i) only
- **(B)** (ii) only
- (C) (i) and (iii) only
- (D) (i), (ii) and (iii)
- 47. Infectious RNA particle without protein coat is called as:
  - (A) Virion
  - (B) Viroid
  - (C) Virusoid
  - (D) Prion 1'e

- algae:
- Algae are primary producers in aquatic food (i) chains
- Planktonic algae produce most of the molecular (ii) oxygen in the Earth's atmosphere
- Petroleum is the fossil remains of the planktonic (iii) algae.

Choose the correct answer/s from the codes given below:

- (A) (i) only
- (ii) only **(B)**
- (C) (i) and (iii) only
- (D) (i), (ii) and (iii)
- 49 Process of breakdown of mycelium, in which each broken fragment gives rise to a new mycelium is :
  - (A) Fragmentation
  - (B) Budding
  - Conjugation (C)
  - (D) Binary fission
- 50. Fungi usually store the reserved food material in the form of:
  - (A) Proteins
  - (B) Starch
  - (C) Glycogen
  - (D) Lipids
- Heterothallism was first observed by : 51.
  - (A) Blakeslee
  - (B) Metha
  - (C) Pasteur
  - (D) Alexopolous

6 ++

- 52. The main nitrogenous waste of paramecium is : 57. Consider the following statements :
  - (A) Urea
  - (B) Ammonia
  - (C) Uric acid
  - (D) Creatinine
- 53. Which of the following statements is incorrect regarding HAT medium?
  - (A) HAT medium is a selective medium
  - (B) Aminopterin in the HAT medium blocks de novo pathway of nucleotide Synthesis
  - (C) Salvage pathway requires aminopterin and thymidine
  - (D) Hypoxanthine is converted to guanine by **HGPRT** enzyme
- 54. Alternative pathway of complement system is activated by: a
  - (A) Antigen-antibody complex
  - (B) Antigen
  - (C) Microorganism or its toxin
  - (D) Antigen bound to MHC
- 55. Activation of B cell receptor by the binding of an epitope result in the formation of :
  - (A) Plasma cells and T cytotoxic cells
  - (B) Memory cells and T cytotoxic cells
  - (C) Plasma cells for antibody production and memory cells for primary response
  - (D) Plasma cells for antibody production and memory cells for secondary response
- 56. The antibody present in the secretions like, tears, 60. colostrums and saliva is :
  - (A) IgA
  - (B) IgE
  - (C) IgG
  - (D) IgM

#### FDM-2549-B

- - Assertion (A): A car rusts because steel reacts with water and oxygen in the air
  - Reason (R): When iron rusts electrons are lost from the metal

Select the correct answer from the codes given below:

- (A) Both (A) and (R) are true, but (R) is the correct explanation of(A)
- (B) Both (A) and (R) are true, and (R) is not the correct explanation of (A)
- (C) (A) is true, but (R) is false
- (D) (A) is false, but (R) is true
- Which of the following organic molecule reacts more rapidly in SN, reaction?
  - (A) 2-bromo hexane

58.

- (B) 1- bromo-3-methyl hexane
- (C) 2-bromo-2-methyl hexane
- (D) 3-bromo hexane
- 59. Which of the following statement is correct in response to hydrogen bond in water?
  - (A) Hydrogen bond is 10% covalent and 90% electrostatic
  - (B) Hydrogen bond is 25% covalent and 75% electrostatic
  - (C) Hydrogen bond is 50% covalent and 50% electrostatic
  - (D) Hydrogen bond is 100% electrostatic

The work of expansion for a system is 500 cal. The heat given to the system is 80 cal. The change in internal energy in the process will be :

- (A) 80 cal
- (B) 500 cal
- (C) -420 cal
- (D) +420 cal
- 7 ++

	Asign a state of the second of the second state of
	ENTRANCE TEST-2017
	SCHOOL OF BIOLOGICAL SCIENCES
	MICROBIOLOGY
otal	Questions : 60
imeA	Allowed : 70 Minutes Roll No. :
1.	Instructions for Candidates : Write your Roll Number in the space provided at the top of this page of Question Booklet and fill up the necessary information in the spaces provided on the OMR Answer Sheet.
2.	OMR Answer Sheet has an Original Copy and a Candidate's Copy glued beneath it at the top. While making entries in the Original Copy, candidate should ensure that the two copies are aligned properly so that the entries made in the Original Copy against each item are exactly copied in the Candidate's Copy.
3.	All entries in the OMR Answer Sheet, including answers to questions, are to be recorded in the Original Copy only.
4.	Choose the correct / most appropriate response for each question among the options A, B, C and D and darken the circle of the appropriate response completely. The incomplete darkened circle is not correctly read by the OMR Scanner and no complaint to this effect shall be entertained.
5.	Use only blue/black ball point pen to darken the circle of correct/most appropriate response. In no case gel/ink pen or pencil should be used.
6.	Do not darken more than one circle of options for any question. A question with more than one darkened response shall be considered wrong.
7.	There will be 'Negative Marking' for wrong answers. Each wrong answer will lead to the deduction of 0.25 marks from the total score of the candidate.
8.	Only those candidates who would obtain positive score in Entrance Test Examination shall be eligible for admission.
9.	Do not make any stray mark on the OMR sheet.
10.	Calculators and mobiles shall not be permitted inside the examination hall.
11.	Rough work, if any, should be done on the blank sheets provided with the question booklet.
12.	OMR Answer sheet must be handled carefully and it should not be folded or mutilated in which case it will not be evaluated.
13.	Ensure that your OMR Answer Sheet has been signed by the Invigilator and the candidate himself/herself.
14.	At the end of the examination, hand over the OMR Answer Sheet to the invigilator who will first tear off the original OMR sheet in presence of the Candidate and hand over the Candidate's Copy to the candidate.
	(D) photosynthesis

......

	27	Q			
1.	The	oldest eukaryotic organisms are considered to	7.	Organ	nisms with amoeboid cells that move within a
	be			netwo	ork of mucous tracks using a typical gliding
	(A)	diplomonads like Giardia		motio	n
	(B)	archaea		(A)	Labyinthomorpha
	(C)	fungi		(B)	Microspora
	(D)	animals		(C)	Apicomplexa
2.	Thep	phospholipids present in cytoplasm membrane of		(D)	Мухоzоа
	euba	cteria is mainly	8.	Whic	h of the following structure is absent in
	(A)	phosphoglycerides		eukar	votic cells?
	(B)	polyisoprenoid		(A)	Mitochondria
	(C)	phospholipoprotein		(R)	Chloronlasts
	(D)	none of these		(D)	Colgistructure
3.	Whic	sh were the investigators who lived at the same		(C)	Goigi structure
	time?	tern are exactly copied in the Candidate's Copy,	i doss	(D)	Mesosome
Copy	(A)	Koch and Pasteur	9.	Which	h of the following is not a function of cysts for
	(B)	Darwin and Woese		Protoz	zoa?
	(C)	Van Leeuenhoek and Ricketts		(A)	Protect against adverse environments
	(D)	Berg and Hooke		(B)	Sites for nuclear reorganization and cell division
4.	Who	was the inventor of the Petri dish?		(C)	Serve as a means of transfer between hosts in
	(A)	R.J. Petri, an assistant of R. Koch			parasitic species
	(B)	A famous French cook		(D)	All of the above
	(C)	Italian glass blower from Petri, Italy	10.	Sexua	I reproduction in the Protozoa occurs most
	(D)	None of the above		comm	only by
5.00	The f	ive-kingdom system of classification was set up		(A)	conjugation
	by			(B)	gametangial contact
	(A)	Louis Pasteur		(C)	binary fission
	(B)	Robert Whittaker		(D)	hinary fusion
	(C)	Robert Koch	11	(D)	isma with complex life avalas which include a
	(D)	Masaki Ogata	11.	Organ	asian bost and an insect host and involves
6.	Holoz	zoic nutrition is characterized by		schizo	gony as part of the cycle belong to which phylum
	(A)	phagocytosis of solid nutrients and subsequent	reid :	of Pro	tozoa?
	w li ca	tormation of phagocytic vacuoles		(A)	Sarcomastigonhora
	(B)	pinocytosis of solid nutrients and subsequent		(A)	Microsmore
		tormation of phagocytic vacuoles		(B)	Microspora
	(C)	phagocytosis of soluble nutrients and		(C)	Apicomplexa
	bibes	subsequent formation of phagocytic vacuoles		(D)	Myxozoa
	(D)	photosynthesis

- 12. A protozoan is defined as
  - (A) motile prokaryotic unicellular protist
  - (B) motile eukaryotic unicellular protist
    - (C) motile eukaryotic unicellular photosynthetic protest
    - (D) motile eukaryotic multicellular protest
- 13. Weil-Felix reaction is based on sharing of antigens between
  - (A) sheep RBCs and EB virus
    - (B) mycoplasma and human O group RBCs
    - (C) rickettsial antigens and antigens of certain strains of Proteus
    - (D) none of these
- 14. Agglutination reaction is more sensitive than precipitation for the detection of
  - (A) antigens
  - (B) antibodies
  - (C) complement
  - (D) antigen-antibody complexes
- 15. In which of the following case a large lattice is formed?
  - (A) Antibody is in excess
  - (B) Antigens and antibodies are in optimal proportion
  - (C) Antigen is in excess
  - (D) None of these
- 16. VDRL test is an example of
  - (A) Tube test
  - (B) Ring test
  - (C) Slide test
  - (D) none of these
- 17. Those reactions in which two or more substances combine to form a single substance is called
  - (A) Combination reaction
  - (B) Displacement reaction
  - (C) Decomposition reaction
  - (D) Double displacement reaction

- 18. Those chemical substances which have a sour taste are:
  - (A) Salt
  - (B) Acid
  - (C) Bases
  - (D) None of the above
- 19. Those chemical substances which have a bitter taste are:
  - (A) Acid
  - (B) Bases
  - (C) Salt

20.

21.

- (D) Concentrated Acids
- The scale on which the strength of acid solutions as well as basic solutions could be represented by making use of hydrogen ion concentrations in them is called:
- (A) Balance scale
- (B) Platform scale
- (C) Pan scale
- (D) pH scale

What is an unsaturated hydrocarbon in which the two carbon atoms are connected by a double bond called?

- (A) Alkanes
- (B) Alkenes
- (C) Alkynes
- (D) Ionic bond
- 22. The phospholipids present in cytoplasm membrane of the archaeo-bacteria is
  - (A) phosphoglycerides
  - (B) polyisoprenoid
  - (C) polyisoprenoid branched chain lipids
  - (D) none of the above
- 23. Organic molecules that increase the rate of metabolic reactions with themselves changing are known as
  - (A) coenzymes
  - (B) enzymes
  - (C) substrates
  - (D) reactants

- 24. Enzymes can
  - not pass through semipermeable membrane (A)
  - pass through semipermeable membrane (B)
  - dissolve semipermeable membrane (C)
  - (D) none of these
- Ascorbic acid acts as a/an 25.
  - reducing agent (A)
  - (B) oxidizing agent
  - oxidizing and reducing agent both (C)
  - (D) none of the above

A deficiency of thiamin produces the disease known 26.

- as
  - (A) beri-beri
  - (B) scurvy
  - (C) cataract
  - (D) anemia
- How many molecules of ATPs are synthesized per 27. NADH oxidation?
  - (A) 2
  - (B) 1
  - 3 (C)
  - (D) 4
- Glycolytic pathway regulation involves 28.
  - (A) allosteric stimulation by ADP
  - (B) allosteric inhibition by ATP
  - (C) feedback, or product, inhibition by ATP
  - all of the above (D)
- In what form does the product of glycolysis enter the 29. TCA cycle?
  - (A) Acetyl CoA
  - Pyruvate (B)
  - (C) NADH
  - (D) Glucose
- Oxidation of a molecule involves 30.
  - gain of electron (A)
  - loss of electron (B)
  - (C) gain of proton
  - loss of proton (D)

- 31. Two true breeding parents are crossed similar to Mendel's P generation. A tall plant is crossed with a short plant. What is the expected outcome for the F1 generation? Opplato B
  - all short (A)
  - (B) alltall
  - all medium height (C)
  - None of the above (D)
- If a plant that has round seeds has a parent that has 32. wrinkled seeds, what is its genotype? (Assume that round is dominant.)
  - RR (A)
  - (B) Rr
  - (C)rr d
  - **RrWw** (D)
- Stem cells are capable of 33.
  - self renewal (A)
  - (B) potency
  - both (A) and (B) (C)
  - none of above (D)
- In a developing embryo, stem cells can differentiate 34. into
  - (A) ectoderm
  - endoderm (B)
  - (C) mesoderm
  - (D) all of above
- Which of the following techniques can be used to 35. determine the defective gene and for developing cancer?
  - Western blot (A)
  - Southern blot (B)
  - Northern blot (C)
  - Eastern blot (D)
- Both DNA gel electrophoresis and SDS-PAGE of 36. proteins are similar because
  - in both cases molecules migrate to the anode (A)
  - both techniques rely on a constant charge to (B) mass ratio
  - both techniques utilize the sieving properties of (C)gels
  - all of the above (D)

- 49. Which of the following is used in the culture of 55. regenerating protoplasts, single cells or very dilute cell suspensions?
  - (A) Nurse medium
  - (B) Nurse or feeder culture
  - (C) Both (A) and (B)
  - (D) None of these
- 50. The phenomenon of the reversion of mature cells to the meristematic state leading to the formation of callus is known as
  - (A) redifferentiation
  - (B) dedifferentiation
  - (C) either (A) or (B)
  - (D) none of these

51. The controversy regarding the use of Bt corn is that it

- (A) is potentially harmful to monarch butterflies
- (B) is a potential allergen to humans
- (C) both (A) and (B)
- (D) can contaminate groundwater
- 52. Which of the following is an organic gas?
  - (A) Hydrocarbons
  - (B) Aldehydes
  - (C) Ketones
  - (D) Ammonia
- 53. Which of the following is/are inorganic gas (es)?
  - (A) Carbon monoxide
  - (B) Hydrogen sulphide
  - (C) Chlorine
  - (D) All of the above
- 54. The major contributor of Carbon monoxide is
  - (A) Motor vehicle
  - (B) Industrial processes
  - (C) Stationary fuel combustion
  - (D) None of the above

- 5. Treatment of municipal water supplies is based upon
  - (A) coagulation, filtration, chlorination
  - (B) chlorination, filtration, coagulation
  - (C) filtration, coagulation, chlorination
  - (D) coagulation, chlorination, filtration
- 56. What is an anaerobic digester?
  - (A) New diet drink
  - (B) Microbe that eats hazardous waste
  - (C) Method to convert agricultural waste into a biogas
  - (D) All of the above
- 57. Which of the following is NOT a possible value of the correlation coefficient?
  - (A) negative 0.9
  - (B) zero
  - (C) positive 0.15
  - (D) positive 1.5
  - (E) negative .05
- 58. A numerical value is used as a summary measure for a sample; such as sample mean, is known as a
  - (A) population parameter
  - (B) sample parameter
  - (C) sample statistic
  - (D) None of the above answers is correct.
- 59. The mean of a sample is
  - (A) always equal to the mean of the population
  - (B) always smaller than the mean of the population
  - (C) computed by summing all the data values and
  - dividing the sum by the number of items
  - (D) None of the above answers is correct.
- 60. Mode is the most frequently occurring data value, it
  - (A) can never be larger than the mean
  - (B) is always larger than the median
  - (C) is always larger than the mean
  - (D) None of the above answers is correct.
